A comprehensive mobile app for a leading tax advisory firm that enables its end users to file their returns in a few easy steps.

#Mobility #Business Processes Digitization

The Client
A market leader in the professional services domain that offers a range of amenities to its end users in the areas of Tax, Risk and M&A advisory services. The company has been offering personalized yet innovative solutions in these areas by leveraging its proven industry expertise and extensive focus on quality.

The Challenge
The company wanted us to leverage the power of mobile platforms that would enable its vast range of end customers to file their tax returns in a few easy steps while ensuring that the required data is captured in a safe and secure manner.

The Solution
- Developed a mobile-centric application that facilitates quick and easy filing of tax returns
- App lets users assess their financial scenario and acts a gateway for easy calculation of income tax return
- Developed web application using PHP-CI framework.
- MVC framework was used to develop application.
- RDS (MySQL) was used as database service.
- Scheduled jobs were created to verify the data on a pre-defined time interval and based upon certain business logic.
- Native mobile apps were developed for Android and iOS platforms.
- Waterfall methodology was used for application development.
- Mokito was used to create wireframe/ layouts/ design.
- Jenkins – a CICD tool was used for Continuous Integration to ensure the build is deployed only when it passes all tests.
- Selenium and Appium was used for automation testing of web and mobile application respectively.

Key Benefits
- Comprehensive tax planning tool for service, business, property and other income sources
- App can send notifications to users about real-time updates on their tax refund status
- A reliable tax planning tool that also acts as an income tax advisor
- App ensures that user data is safeguarded and never shared with any other entity except the official tax authorities
